

Job 1 :

“Créer une VM Debian en mode console 8 Go DD / 1 Go RAM / 1 vCPU , installer docker (cli seulement).”

```
Debian GNU/Linux 12 debian tty1
debian login: root
Password:
Linux debian 6.1.0-43-amd64 #1 SMP PREEMPT_DYNAMIC Debian 6.1.162-1 (2026-02-08) x86_64

The programs included with the Debian GNU/Linux system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Debian GNU/Linux comes with ABSOLUTELY NO WARRANTY, to the extent
permitted by applicable law.
root@debian:~#
```

je fais mes apt install et apt install -y, puis apt install ca-certificates curl gnupg -y.

Ensuite, pour ajouter la clé Docker, je fais :

```
root@debian:~# history | grep install
 1 apt install sudo
 2 sudo apt install
 3 sudo apt install -y
 4 sudo apt install ca-certificates curl gnupg -y
 5 sudo install -m 0755 -d /etc/apt/keyrings
15 apt install docker.io docker-compose
16 apt install docker.io docker-compose
20 history | grep install
root@debian:~# _
```

```
root@debian:~# docker --version
Docker version 20.10.24+dfsg1, build 297e128
root@debian:~# _
```

On a bien installé Docker avec sa version correspondante qui s'affiche juste au-dessus.

Job 2 :

```
root@debian:~# docker ps -a
CONTAINER ID   IMAGE      COMMAND                  CREATED        STATUS      PORTS      NAMES
e7e7956f2036   hello-world  "/hello"                About a minute ago    Exited (0) About a minute ago           optimistic_edison
root@debian:~# docker images
REPOSITORY    TAG       IMAGE ID       CREATED        SIZE
hello-world   latest    1b44b5a3e06a   6 months ago   10.1kB
root@debian:~# _
```

On voit bien qu'il y a le message "hello-world" une fois que j'ai fait docker ps -a puis docker images.

Pour supprimer du contenu, on fait docker rm <ID_DU_CONTENEUR>

Pour supprimer l'image, on fait docker rmi hello-world

Job 3 :

```
root@debian:~/job3# docker build -t my-helloworld .
Sending build context to Docker daemon  3.072kB
Step 1/2 : FROM debian:stable-slim
stable-slim: Pulling from library/debian
9cd6a97ab1ca: Pull complete
Digest: sha256:4448d44b91bf4a13cb1b4e02d9d5f87ed40621d6e33f0ae7b6ddf71d57e29364
Status: Downloaded newer image for debian:stable-slim
--> 47bbac87a5ef
Step 2/2 : CMD echo "Hello from my custom Debian container!"
--> Running in ea84e9652aa3
Removing intermediate container ea84e9652aa3
